

# Electronics Design Engineer

Helsinki, Uusimaa

Reference Number:

**Are you an electronics design professional? Learn more and apply today! We offer a job in an exciting and international working environment where you will have the opportunity to develop and create a career of your own.**

We are now looking for a passionate **Electronics Design Engineer** to join our growing and international organization.

You will be responsible for developing the frequency converter's electronic circuits and systems from concept through to production, testing, documentation and providing outsourced related services such as layout design.

## Enabling success in the role:

- Experience in **printed circuit board design** and the **design of analogue and digital electronics** is essential.
- Practical experience and knowledge of **electronics simulation and design tools** is a must.
- Established experience in **power supply and inductive component design** is essential.
- M.Sc. or B.Sc. degree in electronics or a related field
- Fluency in English is required, and knowledge of Finnish is an advantage.

Background knowledge of inverter principles and main circuits is an asset, and additional knowledge of functional safety circuits is considered an advantage.

We want to be the best employer for you. We listen to your wishes, value your opinions and are committed to maintaining an open working community and developing our operations. We support our employees' sporting and cultural activities. We have an extensive occupational health service to look after our employees' health. We also want to ensure the safety and well-being of our employees outside working hours through our comprehensive accident insurance for leisure time.?

Are you interested? Great! Feel free to submit your application with salary requirements soon, but no later than **6.10.2024**. We will review applications and interview you during the application period, so act fast!
